

Welcome to www.sumdog.com

Introduction

Sumdog's educational games are used in thousands of schools worldwide. They motivate children to work on maths, reading and writing.

As children play, they answer questions - each one personalised to that child's needs. Meanwhile, Sumdog's adaptive learning engine guides their progress.

When your child first starts Sumdog you may find that the first questions set are below their ability level. After the first 200 questions Sumdog adapts and will increase the level of challenge.

Your child's teacher can also fix the type of question your child answers, so if fractions need reinforcing then you may find these questions are concentrated on for a period of time.

iPad & Android

As well as playing on computers, you can use our apps for [iPad and Android](#).

They've all our most popular games - and we're adding more all of the time.

They'll also let your child use Sumdog's fun features, including Pets and the House, and give you access to Sumdog's progress reports.

Rewards and levels

Each correct answer earns your child a virtual Sumdog coin, to buy things for their avatar and house.

At Sumdog, we believe motivation is the key to successful learning.

Frequent rewards give your child a stream of achievable goals, and a personal investment in their Sumdog work.

Motivating goals

As children work, they progress through Sumdog's animal ranks - a great motivation.

The animals get rarer as the child progresses, so there's a real incentive to collect the rarer ranks.

We've given a little introduction to each one, so you can broaden your knowledge of zoology, too!

If you have any questions or are having trouble logging in please get in contact with Mr Auckland via the school office.
